Description: 1st strand cDNA was primed with an oligo(dT) primer [ATGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with SfiI and size selection was performed to exclude fragments <1.5kb.The SfiI-digested PCR product was cloned
                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa; Chordata; Mammalia; Eutheria; Primates; Cercopithecinae; Macaca.

                                                                                                                                                                                                         B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The colynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, cell stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and cell concertion activity and may be useful in the diagnosis and/or confilammation.

Concertification, but was obtained in electronic form part of the printed concertification, but was obtained in electronic format directly from WIPO concertification, but was obtained in electronic format directly from WIPO concertification.

cc acid sequence that has 90 % sequence identity to one of the human cadherin-like asymmetry protein(s) (CLASP-2 A, 2B, 2C, 2E) cadherin-like asymmetry protein(s) (CLASP-2) (CLASP-2A, 2B, 2C, 2E) sequences (PS). (1) is useful for identitying a compound or agent that binds (CLASP-2 polypeptide. An antibody (II) to (I) is useful for cdetecting a CLASP-2 polypeptide in a sample. (II) is useful for comprising a nucleic acid encoding (I) or (II) is useful for comprising a nucleic acid encoding (I) or (II) is useful for comprising a nucleic acid encoding (I) or (II) is useful for preventing correcting a cLASP-2 polypucleotides are useful as probes or primers for correcting a clasp-2 polypucleotides are useful as probes or primers for detection or inhibition of CLASP-2 expression (e.g., antisense or clasp-2 expression), as a lymphocyte marker and for therapeutic polypucleotides or are used as therapeutic polypeptides, produce anti-CLASP-2 polypucleotides can be used in diagnostics (e.g., as probes or plynucleotides or fragments can be used in diagnostics (e.g., as probes or plynucleotides or polypucleotides can construct transgenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polypucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2 polypucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2 polypucleotides can increase differentiation and proliferation of haematopoietic cells, including the pluripotent stem cells to treat those cativation, differentiation of immune cells and can treat or detect deficiencies or disorders of haematopoietic selection of mamune cells and can treat or detect autoimmune diseases, e.g., Addison's disease, haemolytic anaemia, cells, including the pluripotent stem cells to treat those blood protein disorders (e.g., as pammaglobulinaemia, cells or polypeptides can treat or detect autoimmune diseases, e.g., Addison's disease, haemolytic anaemia, cells or polypeptides can treat or detect autoimmune diseases, e.g., Addison's di

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiarthritic, cytostatic, hypotensive, antirheumatic, cantiinflammatory, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the cability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and caugment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory cresponse e,g, arthritis, inflammatory bowel disease and increase chifferentiation and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopaenia and other blood protein disorders. Disorders Disorders Disorders anaemia, thrombocytopaenia and other blood protein disorders. Disorders created by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence encodes human CLASP-2A, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-APR-1999;

                                                                                                                                                                                                                                                                                    The invention relates to an isolated polypeptide (I) comprising an amino cald sequence that has 90 % sequence identity to one of the human cadherin-like asymmetry protein(s) (CLASP)-2 (ACLASP-2A, ZB, ZC, ZE) sequences (PS). (I) is useful for identifying a compound or agent that binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for detecting a CLASP-2 polypeptide in a sample. (II) is useful for comprising a nucleic acid encoding (I), or (II) is useful for preventing corporating a CLASP-2 polypeptide in a subject. A pharmaceutical composition or inhibition and encoding (I), or (II) is useful for preventing corporating a CLASP-2 polypeptide in a subject. A pharmaceutical composition or inhibition of CLASP-2 expression (e.g., antisense or of the autoimmune disease is caused or exacerbated by increased activity of the autoimmune disease or exacerbated by increased activity of the autoimmune disease. The CLASP-2 polyperides or primers for detection or inhibition of CLASP-2 polypeptides, produce anti-CLASP-2 related inhibition), for gene knockout, etc. The CLASP-2 polyperides or are used as therapeutic polypeptides, produce anti-CLASP-2 polyperides can express CLASP-2 polypeptides. The CLASP-2 polypeptides or produce anti-CLASP-2 polypeptides can screen for CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polypucleotides can construct transgenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polypucleotides can treat deficiencies or disorders of the immune system, by activating or inhibiting the cativation, differentiation of immune cells and can treat or detect deficiency polypeptides or polypucleotides can treat or polypeptides or differentiation and proliferation of the endought of the polypeptides or polypeptides or polypeptides or polypeptides or certain (or many) types of haematopoletic cells e.g., immunologic deficiency syndromes including blood protein disorders (e.g., agammaglobulinaemia, or haematopoletic cells e.g., addison's diseas
                                                                                                                                                                                Query Match

```
acid sequence that has 90 % sequence identity to one of the human cadherin-like asymmetry protein(s) (CLASP)-2 (KCLASP-2A), ZB, ZC, ZE) cadherin-like asymmetry protein(s) (CLASP)-2 (KCLASP-2A), ZB, ZC, ZE) cadherin-like asymmetry protein in sample. (II) is useful for detecting a CLASP-2 polypeptide in a sample. (II) is useful for comprising a nucleic acid encoding (I), or (II) is useful for comprising a nucleic acid encoding (I), or (II) is useful for preventing comprising a nucleic acid encoding (I), or (II) is useful for preventing comprising a nucleic acid encoding (I), or (II) is useful for preventing comprising a nucleic acid encoding (I), or (II) is useful for preventing comprising a nucleic acid encoding (I), or (II) is useful for preventing of The station or inhibition of CLASP-2 expression (e.g., antisense or checking an expression of The CLASP-2 polypeptides produce anti-cLASP-2 polypeptides produce anti-cLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides, produce anti-CLASP-2 polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides or polypeptides o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e,g, arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S

                                                                                        g
                                                                                                                                                                                                                            The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, and neuroprotective activities. CLASP-2 can be used to inhibit the continuous and immune response in a subject by interfering with the cantibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated compared activity of THI1 cells. They can also be used to treat chypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory customated by disrupting CLASP-2 function include multiple sclerosis, treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.
                                                                                                                                              Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C(CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, and antiinflammatory also be inhibited by interfering and immune response in a subject may also be inhibited by administering and antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e.g. arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.

                                                                                                                                                     immune response in a subject may also be inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, C proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and caugment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory cresponse e,g, arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat canaemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the ability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an immune response in a subject may also be inhibited by administering an

CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, hich specifically consected an another T cell or B cell. An immune response in a subject by interfering with the cantibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat chypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory crasponse e,g, arthritis, inflammatory bowel disease and increase consecution and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide consecutive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CLAS
                                                                                                                                                                                                                                                       The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the ability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAC8797

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorder;
```

hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e,g, arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.

by increased activi-hypersensitivities, augment immune respo

The present invention describes cadherin-like asymmetry process.

(CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiinflammatory and immune response in a subject by interfering with the callity of a CLASP-2 can be used to inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 conceased activity of TH11 cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit concease e.g. arthritis, inflammatory bowel disease and increase differentiation and proliferation of cells involved in an inflammatory response e.g. arthritis, inflammatory bowel disease and increase treated by disrupting CLASP-2 function include multiple sclerosis, concerning concerning chasp-2 function include multiple sclerosis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning concerning conc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-MAY-1999;

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the ability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated

They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e,g, arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.
                                                                                                                                                                                                                                                                                                                                                        61
